Urgent Market Update

What my Technical and Timing Indicators are Saying Now

Sunday 24 June 2012

© 2012 by Jake Bernstein

www.jakebernstein.com

jake@trade-futures.com

800-678-5253 * 831-430-0600

Why this Webinar?

- Many markets are approaching or are now in cyclical and or seasonal time frames for trend changes
- Economic cycles are reaching a critical juncture
- Geopolitical issues are coming to a turning point
- Numerous divergence signals and setups are appearing
- Central bank actions continue to forecast inflationary outcomes
- Commitments of Traders Report commercial activity reaches record long levels in several cases and in many others continue to forecast strong bull markets
- Small trader sentiment and professional sentiment remain generally negative which provides a bullish backdrop for price movements
- Intermediate term cyclical behavior and forecasts strongly suggest confluence and accelerated change over the next six months
- Market volatility sets the background for additional extreme and potentially explosive price moves
- Generational opportunities continue in several markets

My goals for today

- To update you on the status of timing, cycles and seasonals in all active markets including major stock indices and several stocks
- To project price moves over the next six months
- To explain and clarify why my inflationary expectations continue to dominate my forecasts
- To zero in on timing setups and triggers that will help you take advantage of the moves that I see developing
- If you are a hedger or producer my goal is to provide you with a logical and intelligent forecast of what you can do right now and what to expect in the next few months
- If you are an investor my goal is to provide you with some general as well as specific guidelines regarding the best investments I see developing at this time and
- If you are concerned about what is now developing in economies all over the world, to assuage your fears or concerns with intelligent and logical input as opposed to irrational or politically motivated conclusions

Agenda

- **Current short-term and intermediate-term status of all market futures and financials including the stock market**
- **Are grains and beans about to top seasonally, or SOAR out of sight?**
- **Is the BEST yet to come in all metals?**
- **CURRENCIES - dead cat bounce or major low?**
- **Critical juncture in economies and the cost of money**
- **Natural gas - exploding at last?**
- **Strategies for the next few weeks and months**
- **4 SPREADS to watch right now**
- **Lumber - sleeping giant**
- **"Smells like inflation" wake up!**
- **My game plan**
- **5 stocks for NOW**
- **And more!**

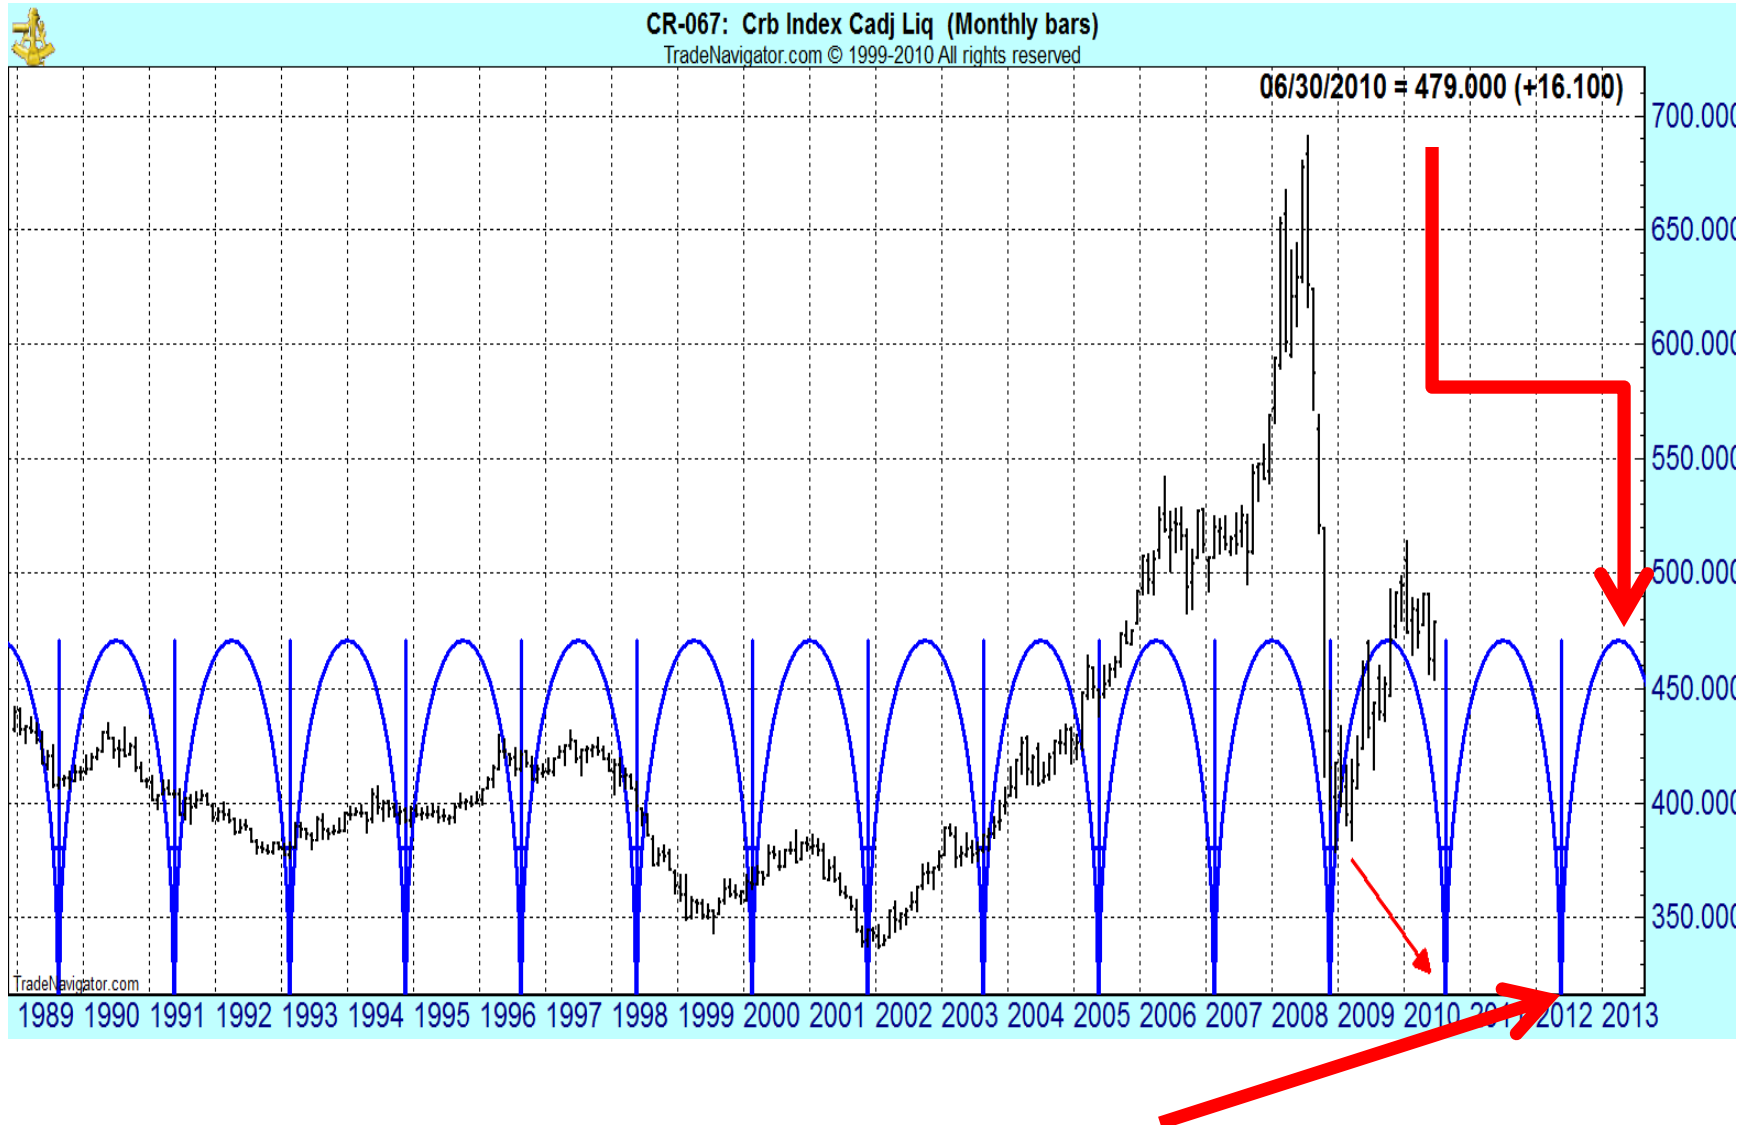

Structure: how we will do it

- We will examine all active markets on the basis of four specific factors as follows;
- 1. intermediate and or long-term and/or short-term cycles
- 2. Seasonal patterns
- 3. Support and resistance levels
- 4. Trend and or projected trend
- 5. COT status and significance where applicable
- 7. Current or developing timing triggers
- 8. expectations and order recommendations
- 9. other factors that may be unique or specific to particular markets

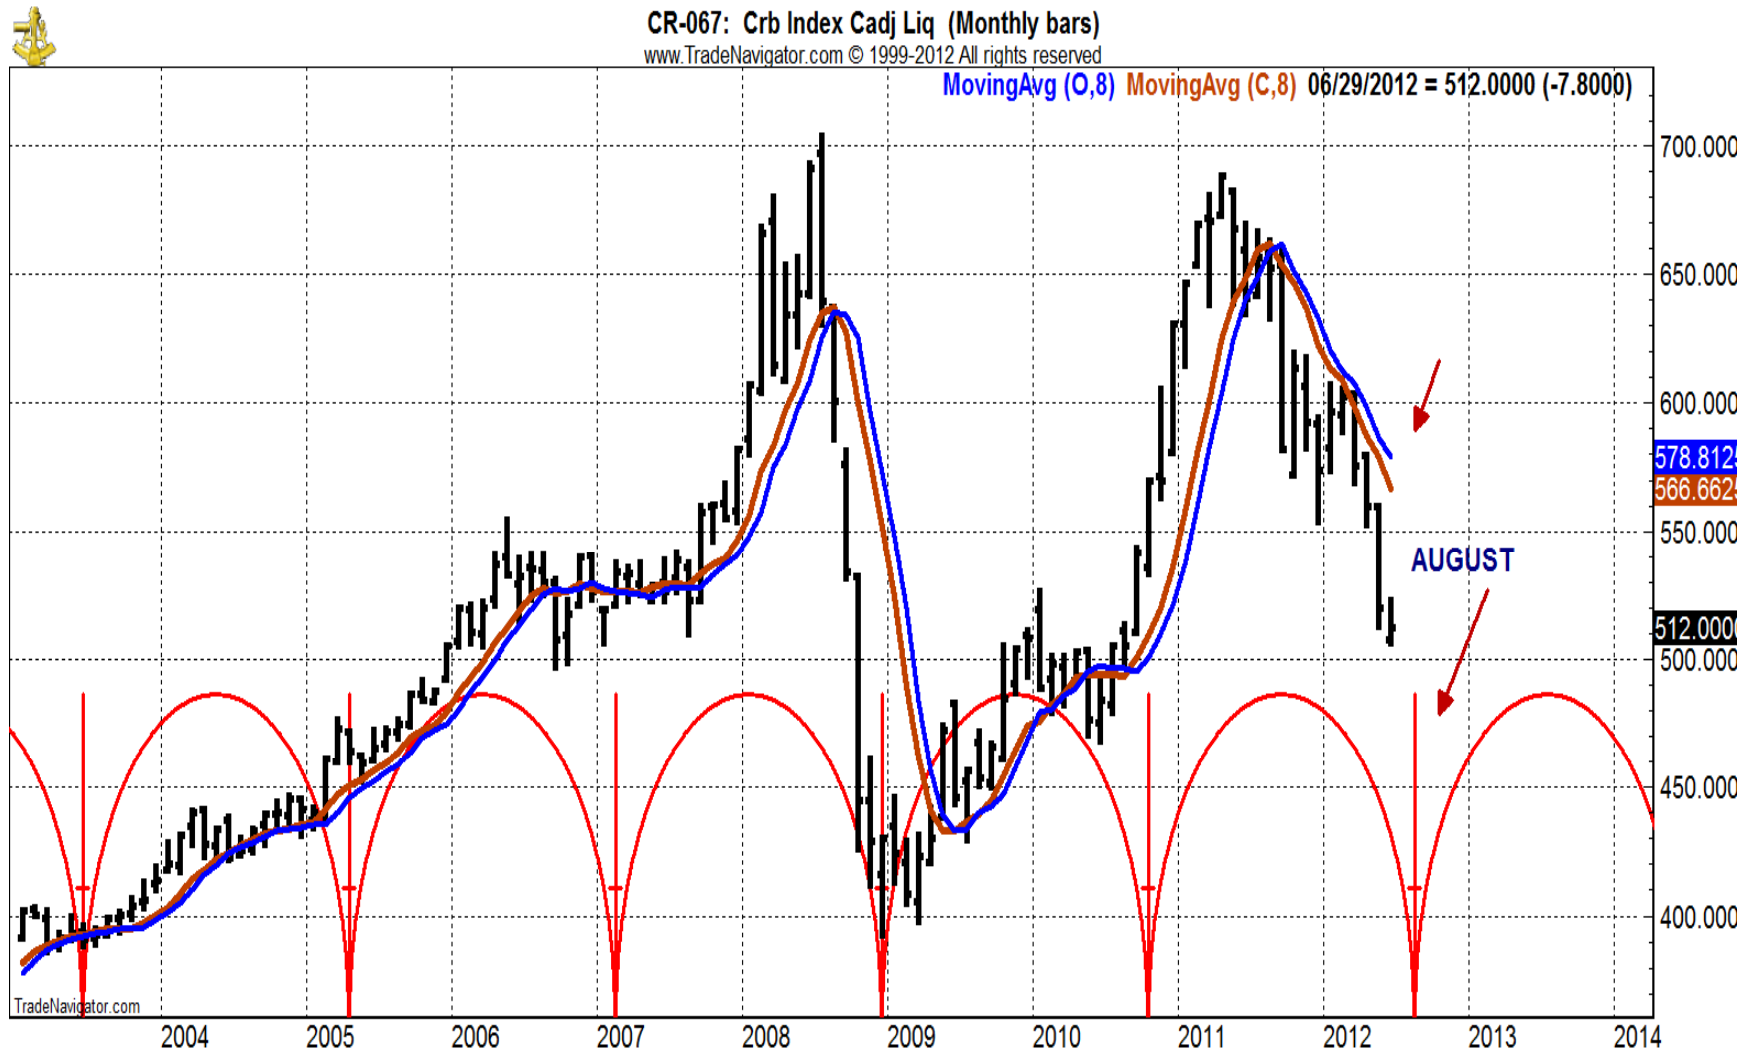

The Major Forces into 2012-13

- Long term cycles and status
- Currency debasement – fiat money
- Currency relationships
- Interest rate cycles and relationships
- Timing triggers
- Geo-political instability as an exacerbating factor (Iran, Syria, Middle East)
- Intermediate term cycles
- COT status of Commercials – MAJOR factor
- Confluence: COT+CYCLES+FIAT MONEY

Approx 2.6-3.2 yr cycle CRB Index: June 2010

CRB What happened and projection

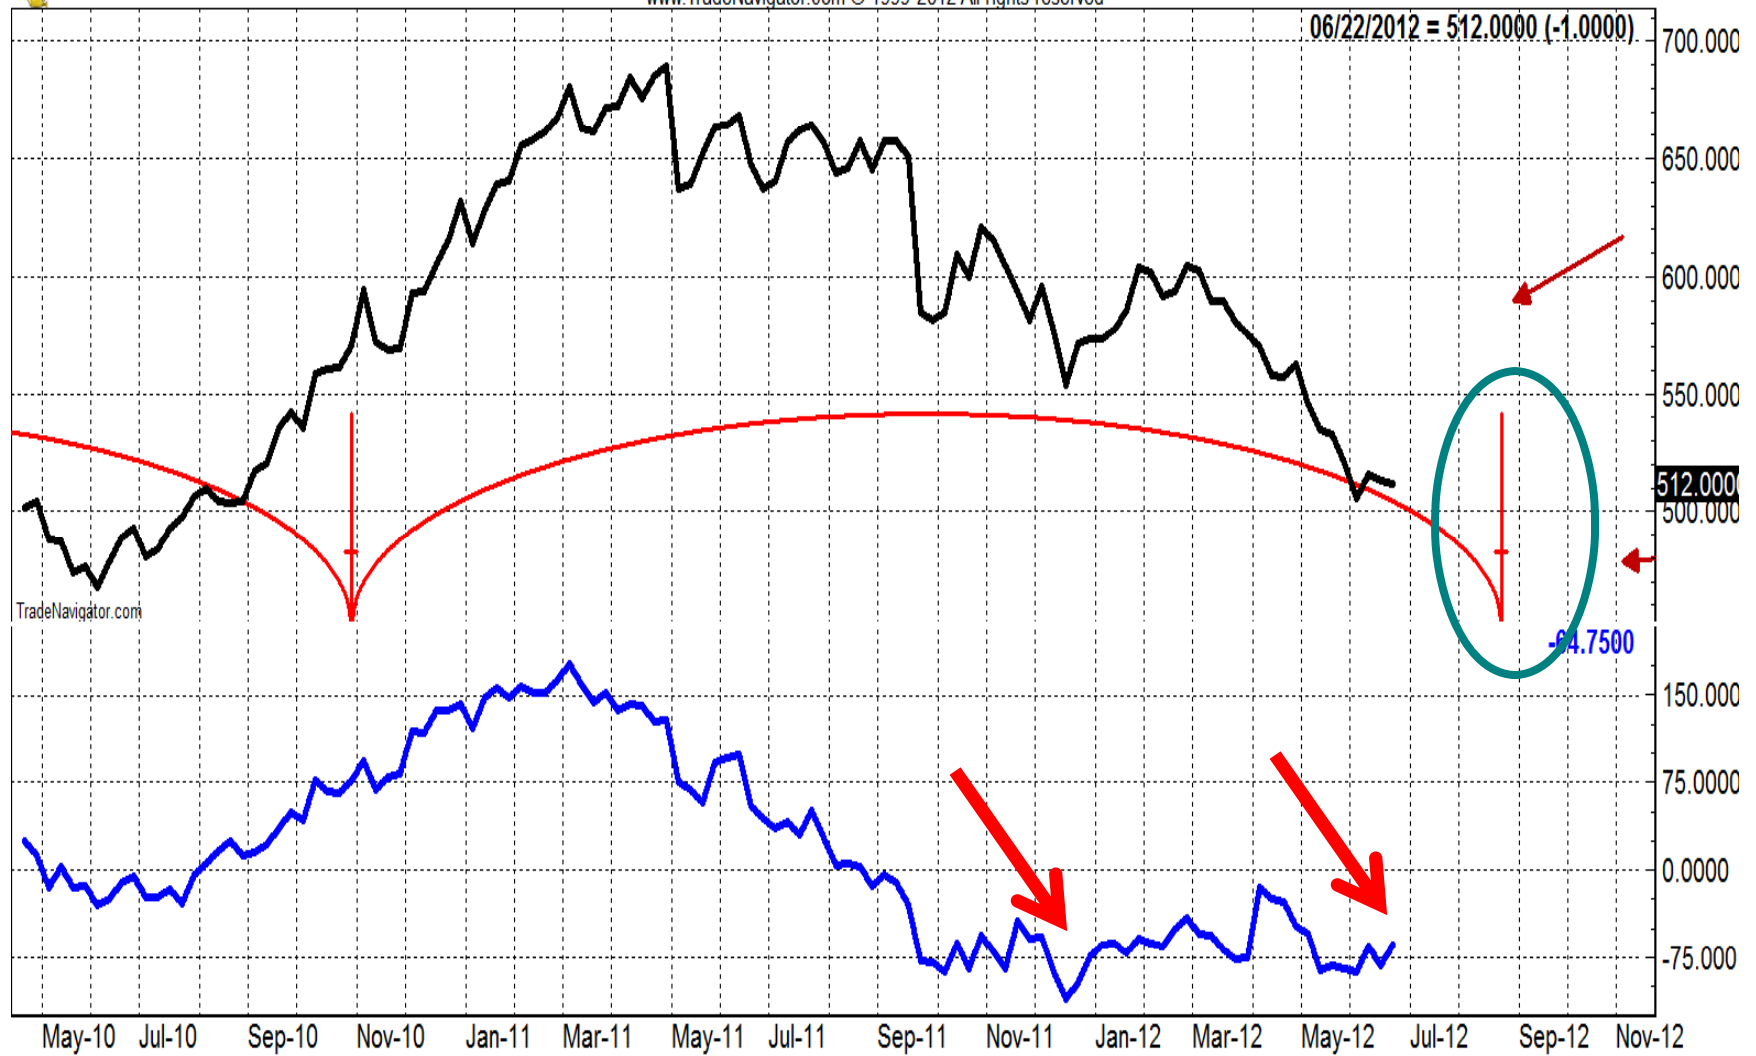

CR weekly

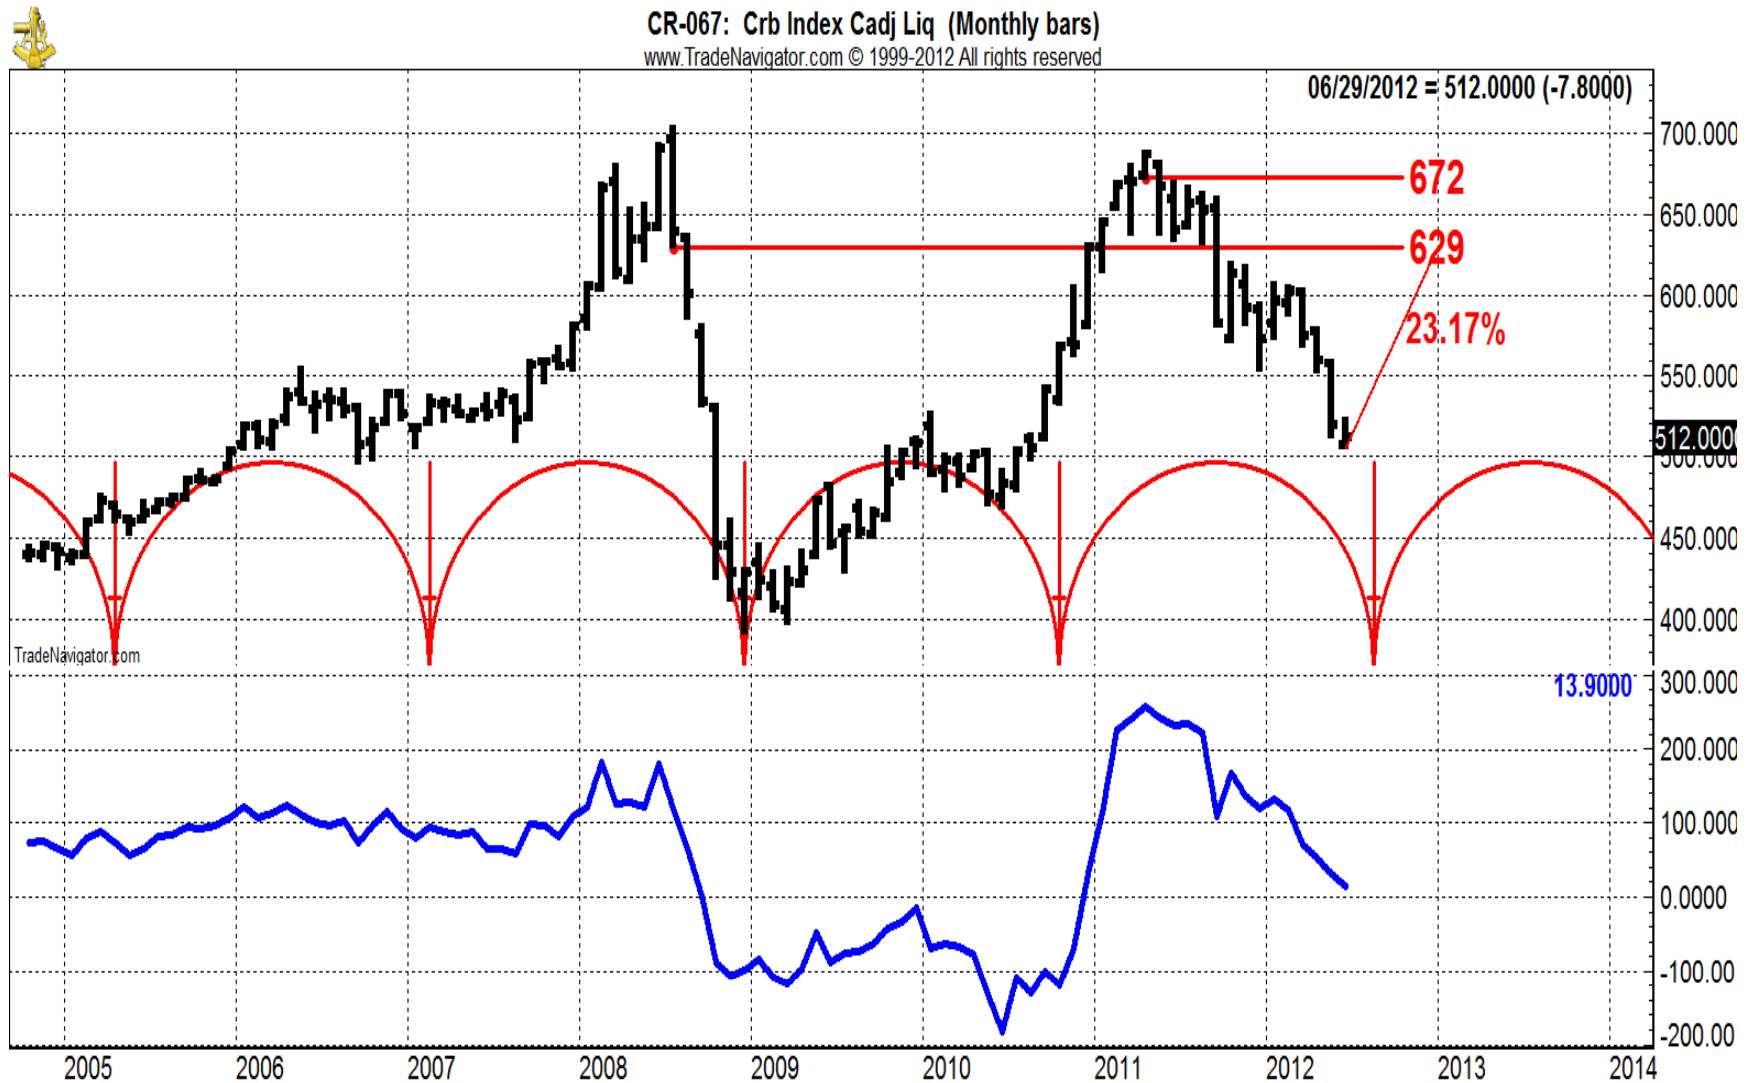

CR-067: Crb Index Cadj Liq (Weekly bars)

www.TradeNavigator.com © 1999-2012 All rights reserved

23%+ gain likely

What does a 23% gain mean?

- Crude oil at 81 = \$16 +
- Gold at 1600 = 1980
- Soybeans at 14.41 = 17.39
- S&P at 1325 = 1629
- Sugar at 20.90 = 24.96
- Be prepared!

Can interest rate futures move higher

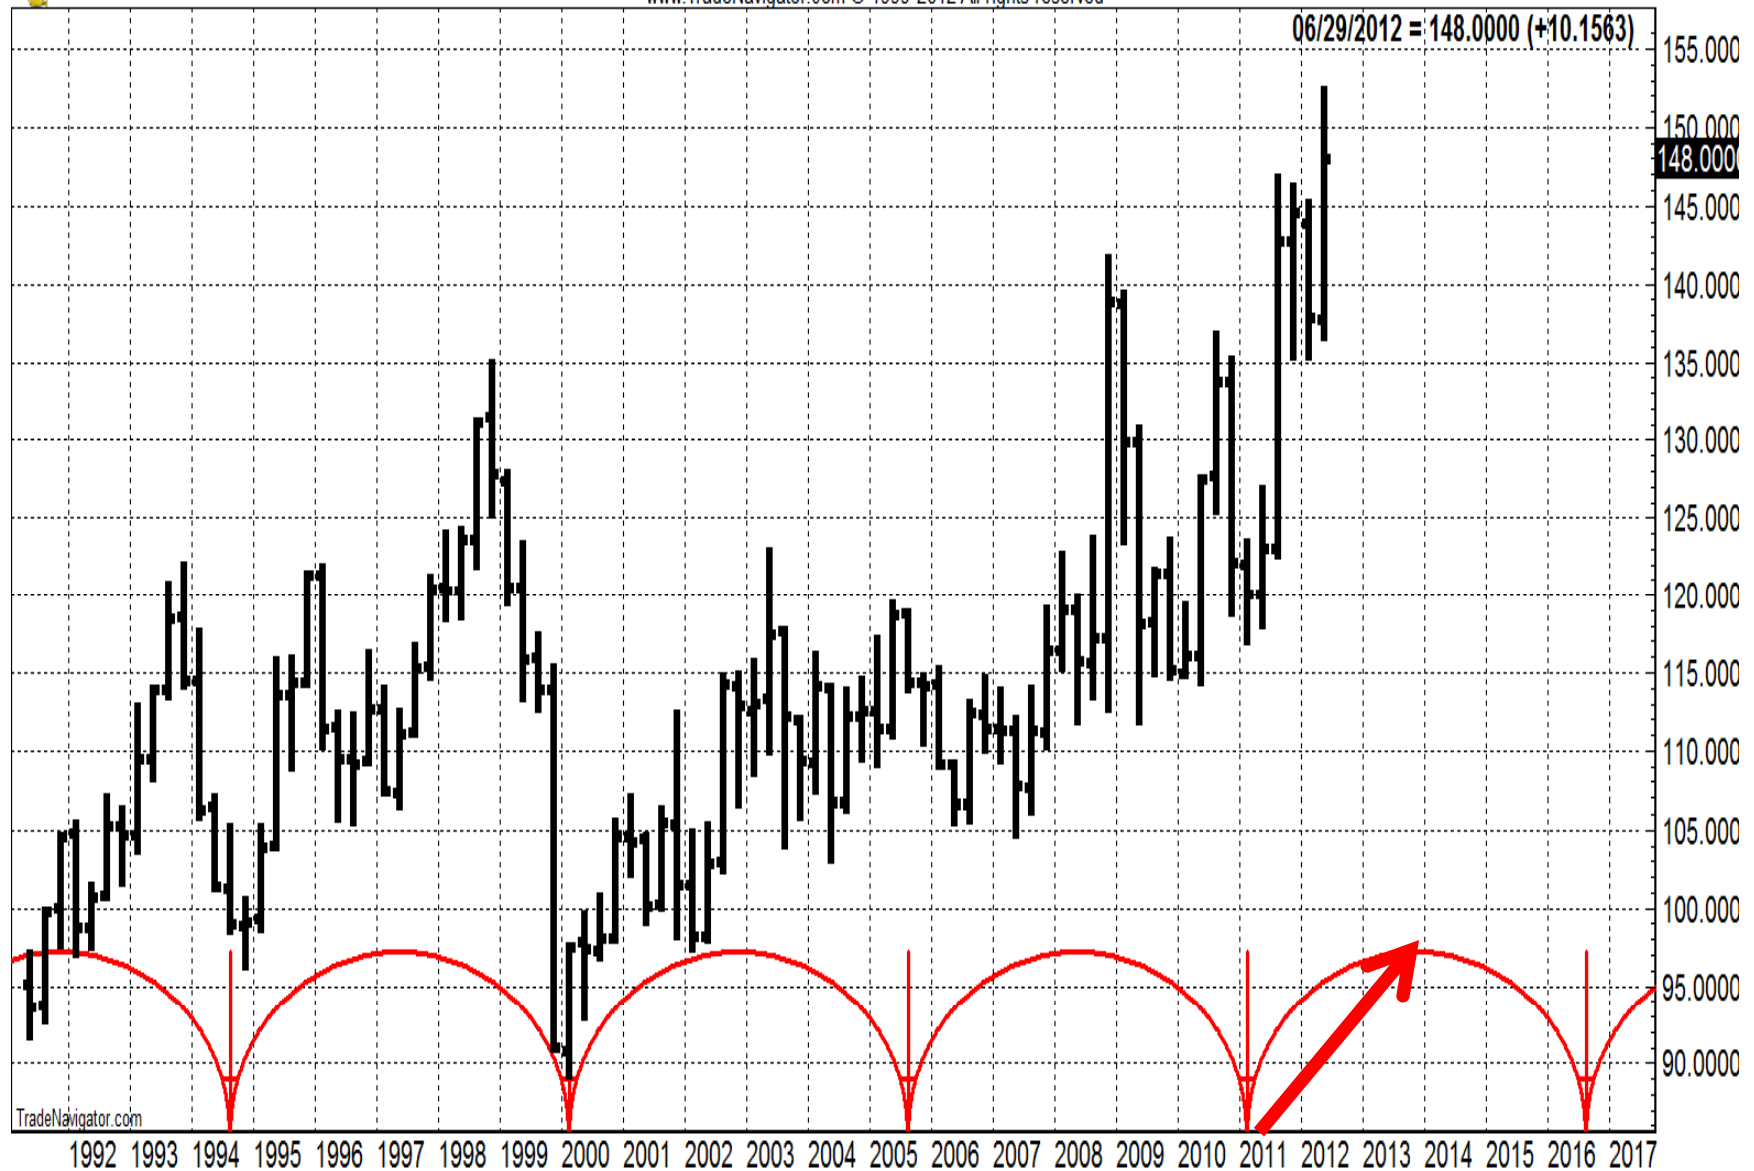

- The odds favor stable or lower interest rates for the next six months due to political factors
- Thereafter interest rates are likely to go higher and considerably so
- All efforts to keep interest rates low due to forthcoming elections will add to the ultimately inflationary scenario

Approx 4.5-5 yr cycle TBonds

ZB-055: T-Bonds 30Yr CBT Elec Cont 1st (Quarterly bars)

www.TradeNavigator.com © 1999-2012 All rights reserved

What it means

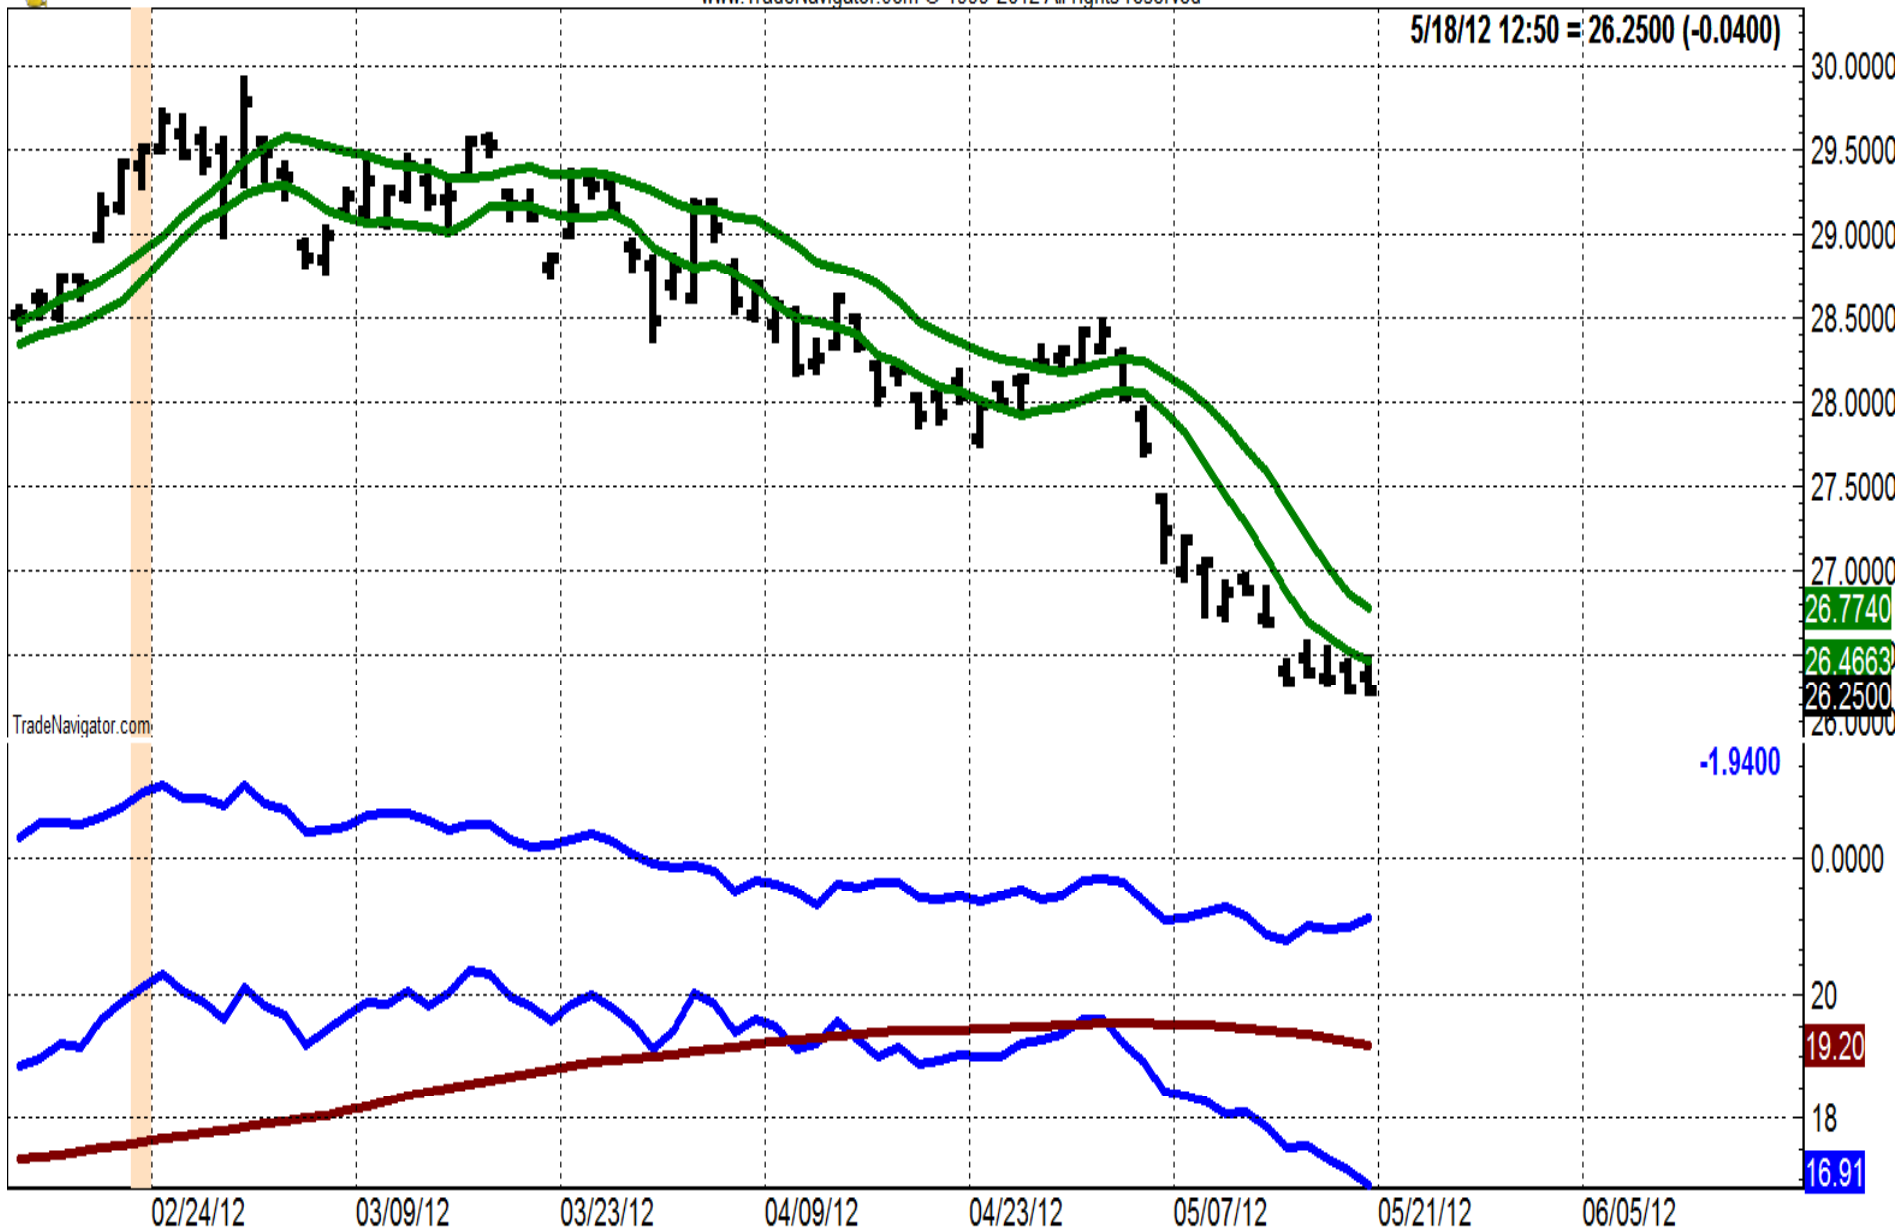

- Rising long term rates will boost borrowing which will signal inflation
- This may not happen until 2013 or late 2012 the soonest and will infect and affect all markets
- How does this correlate with CRB cycle status? Growing inflationary pressures!
